

# ANSCHÜTZ 1710 D KL MONTE CARLO NO. 220.2030, \$1413

## GUN TESTS RECOMMENDS: OUR PICK

This rifle lived up to Anschütz's reputation for quality and accuracy. If you are a right-handed shooter or want iron sights, definitely buy the Anschütz. Lefties should pass on this version of the 1710, however, because of the rollover cheekpiece.

\*HEIGHT WAS MEASURED WITH SCOPE IN SEE-THROUGH RINGS.

The Anschütz's wing safety (black arrow) was difficult to take off. No one's thumb was strong enough to take the safety off while keeping their fingers in the trigger guard, unless they used their left hand to take off the safety. The receiver was drilled and tapped, and it was dovetailed to accept rimfire rings. The target knob (white arrow) on the Anschütz is noticeably larger than the Kimber's, and is bent back toward the shooter at approximately a 35-degree angle. Also, we liked the Anschütz's bolt throw, a short 30-degree movement.

The Anschütz's Schnabel forend is narrower than the Kimber's, and it adds a graceful line to the front end of the gun.

The rollover Monte Carlo cheekpiece was preferred by a small majority of our right-handed testers, but all of the lefties found it uncomfortable.
