

## Buying Tip

The differences in the trigger actions of the two Taurus products, the seven-shot 607 and the eight-shot 608, makes us wonder about the quality of action fitting at the Taurus factory. If you are considering buying the 608, which we otherwise recommend, we urge you to check the trigger pull carefully before you spend your money. Based on our test samples' performance, we wouldn't be surprised to find variations in Taurus trigger pulls. You might as well try as many models as you can at the retail counter and pick the best one.
