

KIMBER SIS CUSTOM/RL .45 ACP, \$1421

Gun Tests grade: A-

Its sights were some of the best we've found, and well coordinated ergonomics helped the gun respond to the shooter like a magic wand. But how do we add real cocking serrations without ruining its looks?

SPECIFICATIONS

GRIP THICKNESS (MAX)	1.3 IN.		
GRIP CIRCUMFERENCE (MAX).....	5.5 IN.		
FRAME MATERIAL/FINISH.....	STAINLESS STEEL		
BARREL.....	STEEL		

The rear sight offered a raised front that could be used to work the slide if necessary. The logo was catchy, but it didn't really work as cocking serrations.

The grip area was particularly well coordinated. The frontstrap featured 30-lpi checkering, and the knurled wood grips were just the right width. Two different-height base pads were supplied. The solid profile trigger offered a distinctive retro look.
