We liked the finish on the chamber end of the barrel because it looked substantial and the contrast in color made it easier to keep clean. The rear sight was adequate visually but we needed more elevation adjustment than was available.

We think the addition of a precision scope mount such as the Gamo component supplies a better grip than rings clamped directly to a grooved receiver.

The Walther and the Dream Rider had muzzle brakes that seemed to make them louder. The Gamo rifle was fit with an "integrated noise dampener" that really worked.
