WEBSITE OR EMAIL.....	WWW.SIGARMS.COM

The magazine release (arrow) could be moved to the right side. Along with the deletion of the decocker, the P226R DAK was more left hand-shooter friendly than the Sigarms TDA models. An accessory rail is now standard equipment on nearly every Sigarms handgun.

Barrel lockup on the Sigarms pistol took place at five different points. The most obvious points were just below the muzzle (inset, right, and far right, above arrow) and a little further back on top of the barrel. Weight-bearing marks were a dead giveaway when searching for lubrication points to keep the gun properly maintained.
